it is commonly assumed that computers process information but what is information in a technical important but nevertheless rather narrow sense is non-information theory gives a first answer to this question. This theory focuses on measuring the information content of a message. Essentially this measure is the reduction of the uncertainty obtained by receiving a message. The uncertainty of a situation of ignorance in turn is

measured by entropy this theory has had an immense impact on the technology of information storage data compression information transmission and coding and still is a very active domain of research shannon's theory has also attracted much interest in a more philosophic look at information although it was readily remarked that it is only a syntactic theory of information and neglects semantic issues several attempts have been made in philosophy to give information theory a semantic flavor but still mostly based on or at least linked to shannon's theory approaches to semantic information theory also very often make use of formal logic thereby information is linked to reasoning deduction and inference as well as to decision making further entropy and related measure were soon found to have important connotations with regard to statistical inference surely statistical data and observation represent information information about unknown hidden parameters thus a whole branch of statistics developed around concepts of shannon's information theory or derived from them also some proper measurements appropriate for statistics like fisher's information were proposed

in tax inequality and human rights experts in human rights law and in tax law debate the linkages between the two fields and highlight how each can help to tackle rapidly growing inequality in the economic social and political realms against a backdrop of systemic corporate tax avoidance widespread use of tax havens persistent pressures to embrace austerity policies and growing gaps between the rich and poor this book encourages readers to understand fiscal policy as human rights policy and thus as having profound consequences for the well being of citizens around the world prominent scholars and practitioners examine how the foundational principles of tax law and human rights law intersect and diverge discuss the cross border nature and human rights impacts of abusive practices like tax avoidance and evasion question the reluctance of states to bring transparency and accountability to tax policies and practices highlight the responsibility of private sector actors for shaping and misshaping tax laws and critically evaluate domestic tax rules through the lens of equality and nondiscrimination the contributing authors also explore how international human rights obligations should influence the framework for both domestic and international tax reforms they address what human rights law requires of state tax policies and how tax laws and loopholes affect the enjoyment of human rights by people outside a state's borders because tax and human rights both turn on the relationship between the

individual and the state neo liberalism s erosion of the social contract threatens to undermine them both
