throughout history human life has been seriously threatened by bacterial infectious diseases after the discovery of antibiotics humanity thought it had won the fight against infectious bacteria however considering the rapid evolution of bacterial multidrug resistance and exhausted pipeline of antibiotics for fighting bacterial infectious diseases we are approaching the post antibiotic era unlike eukaryote bacteria are proficient in exchanging their genetic materials with others by means of horizontal gene transfer hgt as a vehicle for antibiotic resistance gene arg plasmid is self replicable and transferable in a wide range of host bacteria moreover ways of hgt mediated args spreading are highly diverse among different species

implicating complex evolution routes for the development of multidrug resistance in bacteria in recent years multidrug resistance plasmids have been widely found in bacteria not only from clinical patients but also from animals birds and plants as well as from natural environmental settings including soil and water heralding that the post antibiotic era is much closer than we previously thought the global crisis of multidrug resistance calls for a closer collaboration among people of different professions in different regions countries and continents which will help us recognize the current situation and eventually find effective and long lasting solutions for fighting against infectious bacteria
